

URBANKART: END-TO-END E-COMMERCE PROJECT

BUSINESS INSIGHT

EXECUTIVE DASHBOARD ANALYSIS

DASHBOARD OBJECTIVE

Evaluate overall business performance, identify revenue drivers, assess customer acquisition effectiveness, and determine geographical and category-level concentration risks.

Key Business Questions

- How much revenue has UrbanKart generated?
- Which states contribute the most sales?
- Which product categories drive revenue?
- Which acquisition channels deliver the highest revenue?
- How is revenue distributed across loyalty tiers?

- Is the business becoming overly dependent on specific regions, categories, or customer segments?

Executive Insights

Insight 1: Strong revenue scale with high order volume

Observation: UrbanKart generated **₹12.6 billion** from **391K orders** with an **Average Order Value (AOV) of ₹32.2K**.

Interpretation: The business is operating at a substantial transaction scale while maintaining a relatively high average order value, indicating a healthy mix of premium and mid-range products.

Business Impact: Even small improvements in conversion rate or repeat purchase frequency can generate significant incremental revenue.

Insight 2 : Revenue accelerated sharply after July 2024

Observation: The monthly revenue trend shows consistent growth, with a pronounced surge after July 2024.

Interpretation: This suggests strong seasonal demand, successful promotional campaigns, or improved customer acquisition effectiveness during the second half of the year.

Business Impact: Peak-period demand places additional pressure on inventory availability, warehouse operations, logistics capacity, and customer support.

Insight 3: Maharashtra dominates geographic revenue contribution

Observation: Maharashtra generated **₹3.1bn**, nearly double the revenue of Delhi (**₹1.6bn**).

Interpretation: The business has established a particularly strong market presence in Maharashtra, likely supported by higher customer density and stronger demand.

Business Impact: Overdependence on a single state increases regional concentration risk if market conditions change.

Insight 4 : Top three states contribute a large share of revenue

Observation: Maharashtra, Delhi, and Karnataka together contribute ₹6.2bn, approximately **49% of total revenue**.

Interpretation: Revenue is concentrated in a limited number of high-performing markets.

Business Impact: Expanding customer acquisition efforts in mid-tier states could improve revenue diversification and reduce regional dependence.

Insight 5: Electronics is the primary revenue engine

Observation: Electronics generated ₹4.5bn, approximately **36% of total revenue**.

Interpretation: Customer demand is heavily skewed toward electronics products, making the category the core driver of business performance.

Business Impact: While profitable, heavy dependence on one category increases exposure to technology market cycles and competitive pricing pressure.

Insight 6 : Furniture is a strong secondary growth category

Observation: Furniture contributed ₹2.9bn, roughly **23% of total revenue**.

Interpretation: The combination of Electronics and Furniture accounts for nearly **59% of overall revenue**.

Business Impact: These two categories should receive priority in inventory planning, supplier negotiations, and promotional investments.

Insight 7: Several categories remain underpenetrated

Observation: Books and Beauty each generated only ₹0.1bn, while Fashion generated ₹0.3bn.

Interpretation: These categories are either receiving limited marketing exposure or have lower customer adoption.

Business Impact: Underperforming categories may represent untapped growth opportunities if positioned correctly.

Insight 8: Organic acquisition delivers the highest revenue

Observation: Organic traffic generated ₹4.3bn (34%), outperforming all paid channels.

Interpretation: Brand visibility, SEO, and direct customer discovery are major revenue contributors.

Business Impact: Organic acquisition reduces dependency on paid advertising and improves long-term customer acquisition efficiency.

Insight 9: Google Ads remains the strongest paid channel

Observation: Google Ads generated ₹3.2bn (25%), while Meta Ads generated ₹2.3bn (18%).

Interpretation: Search-intent advertising appears to convert more effectively than social advertising.

Business Impact: Marketing ROI is likely stronger for search-based campaigns than for purely social acquisition campaigns.

Insight 10: Bronze customers contribute the majority of revenue

Observation: Bronze-tier customers generated ₹7.5bn (60%), while Gold and Platinum together contributed only 15%.

Interpretation: The loyalty program is not yet converting a significant portion of customers into higher-value tiers.

Business Impact: Increasing migration from Bronze to Silver/Gold could materially improve customer lifetime value and retention.

Strategic Business Recommendations

-  **Expand Electronics and Furniture assortment** - Increase SKU depth and introduce complementary products to maximize cross-selling opportunities.
-  **Strengthen operations before peak seasons** - Increase inventory procurement and warehouse staffing before expected demand surges.
-  **Increase investment in SEO and organic growth** - Organic traffic already generates the largest revenue share and offers lower long-term acquisition costs.
-  **Reallocate part of the marketing budget toward Google Ads** - Prioritize high-intent search campaigns while optimizing Meta Ads targeting.
-  **Launch targeted campaigns in underperforming states** - Focus on Uttar Pradesh, Rajasthan, Madhya Pradesh, and West Bengal to diversify geographic revenue.
-  **Improve loyalty tier progression** - Offer milestone rewards and personalized promotions to move Bronze customers into higher-value tiers.
-  **Experiment with growth initiatives for Beauty, Books, and Fashion** - Test category-specific promotions and bundled offers before committing larger budgets.

Expected Business Impact

If these recommendations are implemented –

1. Revenue Growth : 5-8%

Additional revenue from Electronics, Furniture, and peak-season optimization.

2. Acquisition Efficiency : Lower CAC

Reduced customer acquisition cost through stronger organic traffic contribution.

3. Customer Value : Higher CLV

Improved customer lifetime value through loyalty-tier upgrades and retention initiatives.

4. Revenue Diversification : Lower Risk

Reduced revenue concentration risk through geographic and category diversification.

CUSTOMER ANALYSIS

DASHBOARD OBJECTIVES

Understand customer demographics, retention, acquisition performance, and purchasing behavior to identify opportunities for improving customer lifetime value and long-term business growth.

Key Business Questions

- How engaged is the customer base?
- How effective is customer retention?
- Which demographic groups drive the business?
- Which acquisition channels attract customers?
- What opportunities exist to increase customer lifetime value?

Executive Insights

Insight 1: More than half of customers return for additional purchases

Observation: 55,022 customers (55.02%) placed more than one order during the analysis period.

Interpretation: More than half of the customer base made repeat purchases, indicating strong customer engagement and satisfaction.

Business Impact: Repeat customers typically have a higher lifetime value and lower acquisition cost than new customers, making them a key driver of sustainable revenue growth.

Insight 2: A large share of customers remains active

Observation: Approximately 95K customers are currently active.

Interpretation: Most registered customers continue interacting with the platform, indicating healthy customer engagement.

Business Impact: Maintaining this active customer base provides a strong foundation for future sales through retention and cross-selling initiatives.

Insight 3: Customers generate high lifetime spending

Observation: The average customer spend is ₹125.9K.

Interpretation: Customers contribute significant value over their relationship with UrbanKart rather than through one-time purchases alone.

Business Impact: Increasing purchase frequency among existing customers is likely to deliver higher returns than relying solely on new customer acquisition.

Insight 4: Customer acquisition remains stable throughout the year

Observation: Monthly customer signups fluctuate moderately, with stronger acquisition during **January, March, May, August, October, and December**.

Interpretation: Customer acquisition appears to align with seasonal shopping periods and marketing campaigns rather than remaining completely uniform.

Business Impact: Marketing investments during these high-performing months are likely generating stronger customer acquisition outcomes.

Insight 5: Young professionals represent the core customer segment

Observation: Customers aged **25–34** account for approximately **36K users**, followed by the **35–44** age group with **31K customers**.

Interpretation: UrbanKart primarily attracts working-age consumers with higher purchasing power and greater online shopping adoption.

Business Impact: Product assortment, pricing strategies, and marketing campaigns should continue prioritizing these demographics while identifying opportunities to expand into underrepresented age groups.

Insight 6: Older customer segments remain underrepresented

Observation: Customer counts decline steadily beyond the age of 45, with the **55+** segment representing only **6K customers**.

Interpretation: UrbanKart has relatively limited penetration among older consumers.

Business Impact: This represents a potential growth opportunity through simplified user experiences, trust-building initiatives, and products targeted toward older demographics.

Insight 7: Customer acquisition is gender-balanced

Observation: The customer base consists of approximately **52% male** and **46% female** customers.

Interpretation: UrbanKart successfully appeals to both genders without significant imbalance.

Business Impact: Broad-based marketing campaigns remain appropriate, while category-specific campaigns can be tailored based on purchasing preferences rather than overall customer volume.

Insight 8: Organic acquisition remains the primary growth engine

Observation: Organic channels contribute the largest share of customers, followed by Google Ads and Meta Ads.

Interpretation: Customers continue discovering the platform naturally or through search, reducing dependence on expensive paid acquisition.

Business Impact: Continued investment in SEO, content marketing, and brand visibility is likely to generate sustainable customer growth at lower acquisition costs.

Insight 9: Paid marketing remains an important acquisition driver

Observation: Google Ads and Meta Ads together contribute a significant proportion of customer acquisition.

Interpretation: Paid advertising effectively complements organic growth by expanding market reach.

Business Impact: Continuous campaign optimization is required to maximize customer acquisition while maintaining acceptable acquisition costs.

Insight 10: A small group of customers contributes exceptional revenue

Observation: The Top 10 customers each generated approximately ₹1.8M–₹2.2M in revenue.

Interpretation: A segment of highly valuable customers contributes disproportionately to business performance.

Business Impact: Losing these customers would have a measurable impact on revenue, making retention strategies particularly important for high-value accounts.

Strategic Business Recommendations

Priority Recommendation

High	Develop personalized loyalty campaigns targeting high-value repeat customers with exclusive rewards, early product access, and premium support.
High	Launch automated retention campaigns for inactive or declining customers using personalized email, app notifications, and targeted offers.
High	Strengthen SEO and content marketing initiatives, as Organic acquisition remains the largest source of customer growth.
Medium	Optimize Google Ads campaigns by focusing on keywords and audiences that generate higher-value customers rather than maximizing click volume alone.
Medium	Expand product assortments and promotional campaigns targeting the 25–44 age group, which represents the largest customer segment.
Medium	Design campaigns specifically for customers aged 45+ by promoting trust, convenience, and categories aligned with their purchasing needs.
Low	Introduce a VIP customer program for top-spending customers, including personalized recommendations, dedicated support, and exclusive promotional events.

Expected Business Impact

Customer Retention

Improved engagement initiatives can increase repeat purchase frequency while reducing customer churn.

Customer Lifetime Value

Personalized marketing and loyalty enhancements can increase the long-term value generated by each customer.

Marketing Efficiency

Greater emphasis on Organic and high-performing paid channels can improve return on marketing investment while lowering customer acquisition costs.

Revenue Growth

Increasing purchase frequency among existing customers is expected to contribute more efficiently to revenue growth than relying exclusively on acquiring new customers.

Market Expansion

Targeting older demographic groups provides an opportunity to diversify the customer base and unlock incremental revenue.

PRODUCT & INVENTORY ANALYSIS

Dashboard Objective

Evaluate product performance, inventory health, supplier contribution, and warehouse distribution to optimize product availability, improve operational efficiency, and support revenue growth.

Key Business Questions

- Which products generate the highest sales and revenue?
 - Is inventory sufficient to meet customer demand?
 - Which suppliers contribute the most revenue?
 - How is inventory distributed across warehouses?
 - Are there inventory concentration or stockout risks?
-

Executive Insights

Insight 1: UrbanKart maintains a broad product portfolio

Observation: The catalog contains **1,892 active products**, with **977K units sold** during the analysis period.

Interpretation: The business offers a diverse product range while maintaining strong sales volume, indicating healthy product-market fit across multiple categories.

Business Impact: A large product portfolio supports customer choice but increases inventory management complexity and supplier coordination.

Insight 2: Inventory investment supports business growth

Observation: Total inventory is valued at **₹6.7 billion**, with only **167 products (approximately 5%)** classified as Low Stock.

Interpretation: Inventory levels are generally well managed, ensuring high product availability while minimizing stockout risk.

Business Impact: Maintaining adequate inventory supports customer satisfaction and protects revenue by reducing missed sales opportunities.

Insight 3: Inventory availability remains healthy

Observation: Approximately **94% of inventory** is classified as **In Stock**, while only **5%** requires replenishment.

Interpretation: Current inventory planning effectively balances stock availability with operational efficiency.

Business Impact: Proactive inventory management reduces emergency procurement costs and improves order fulfillment performance.

Insight 4: Product demand is distributed across multiple SKUs

Observation: The highest-selling product, **Tata Coffee XL**, sold **918 units**, with the remaining top-selling products showing similar sales volumes.

Interpretation: Demand is relatively balanced among top-performing products rather than being concentrated in a single bestseller.

Business Impact: Balanced demand reduces dependence on individual products and lowers inventory concentration risk.

Insight 5: Electronics products dominate revenue generation

Observation: Products such as **Sony USB Hub Plus**, **HP Portable SSD**, **boAt Gaming Mouse**, **Lenovo Wireless Earbuds**, and **Mi Smart Watch** generate the highest individual revenues, with the top product contributing approximately **₹67.9 million**.

Interpretation: Premium electronics continue to deliver the highest revenue despite not necessarily having the highest sales volume.

Business Impact: High-value products contribute disproportionately to profitability and require priority inventory allocation and marketing support.

Insight 6: Supplier performance is concentrated

Observation: **Nayak Mitter Distribution** generated approximately **₹0.37 billion** in product revenue, making it the highest-performing supplier.

Interpretation: Certain suppliers contribute significantly more to overall sales than others.

Business Impact: Heavy reliance on a small number of suppliers may expose the business to procurement and supply chain risks if disruptions occur.

Insight 7: Lucknow warehouse carries the highest inventory

Observation: The **Lucknow warehouse** maintains the largest stock quantity, followed by **Mumbai, Hyderabad, Delhi, Kolkata, Ahmedabad, Bengaluru, and Chennai**.

Interpretation: Inventory appears to be concentrated in strategically important distribution hubs.

Business Impact: Warehouse allocation should continue reflecting regional demand while avoiding excessive stock concentration.

Insight 8: Inventory investment is heavily concentrated in Electronics

Observation: Electronics accounts for **₹3.06bn** of inventory value, followed by Furniture at **₹1.77bn**. Together, these two categories represent nearly **72%** of the company's total inventory value.

Interpretation: UrbanKart has made a significant inventory investment in premium, high-demand categories. While this supports product availability, it also exposes the business to higher carrying costs and inventory risk if demand slows.

Business Impact: Excess inventory in high-value categories can increase warehousing costs, reduce cash flow flexibility, and lead to markdowns if products remain unsold.

Insight 9: Lower-value categories require minimal inventory investment

Observation: Books (**₹0.06bn**), Beauty (**₹0.04bn**), and Grocery (**₹0.03bn**) represent the smallest inventory investments.

Interpretation: These categories either experience lower customer demand or follow a lean inventory strategy with faster replenishment cycles.

Business Impact: Maintaining lower inventory in these categories reduces carrying costs but requires close monitoring to prevent stockouts during demand spikes.

Insight 10: Inventory management appears operationally stable

Observation: Low-stock items represent only a small fraction of the overall catalog, while warehouse inventory remains well distributed.

Interpretation: UrbanKart currently demonstrates effective inventory planning and replenishment practices.

Business Impact: Stable inventory operations support higher service levels, fewer stockouts, and improved customer satisfaction.

Strategic Business Recommendations

Priority	Recommendation
High	Prioritize replenishment of the 167 low-stock products to prevent stockouts during periods of high demand.
High	Increase inventory allocation for high-revenue electronics while using demand forecasting to avoid overstocking.
High	Develop contingency sourcing plans for key suppliers such as Nayak Mitter Distribution to reduce supply chain risk.
Medium	Review inventory allocation across warehouses quarterly to ensure stock levels reflect regional demand patterns.
Medium	Optimize inventory investment using demand forecasting. Electronics and Furniture together account for over 70% of inventory value, making accurate demand forecasting essential to avoid excess stock while maintaining product availability.

Priority Recommendation

Medium **Monitor premium products separately from high-volume products**, as they contribute differently to revenue and profitability.

Low **Implement automated inventory alerts** based on reorder levels and sales velocity to support proactive replenishment.

Expected Business Impact

Improved Product Availability

Timely replenishment of low-stock items will reduce lost sales and improve customer satisfaction.

Higher Revenue

Optimizing inventory for premium, high-revenue products can increase sales without proportionally increasing inventory investment.

Lower Supply Chain Risk

Diversifying supplier relationships reduces dependence on individual vendors and improves business resilience.

Better Inventory Utilization

Demand-based warehouse allocation minimizes excess inventory while improving fulfillment efficiency.

Reduced Holding Costs

Monitoring inventory turnover across categories helps identify slow-moving products and optimize stock levels.

RETURNS & CUSTOMER EXPERIENCE ANALYSIS

Dashboard Objective

Evaluate post-purchase performance by analyzing returns, customer reviews, shipping outcomes, payment preferences, and refund trends to improve customer satisfaction while minimizing operational costs.

Key Business Questions

- Is the return rate within an acceptable range?
- How satisfied are customers with their purchases?
- Which payment methods are preferred?
- What are the major causes of product returns?
- How effective is the order fulfillment process?

Executive Insights

Insight 1: UrbanKart maintains a low return rate despite high sales volume

Observation: UrbanKart processed ₹105.3 million in refunds while maintaining a return rate of only 3.05%.

Interpretation: Compared to the overall order volume, the return rate remains relatively low, indicating that most purchases meet customer expectations.

Business Impact: Lower return rates reduce reverse logistics costs, preserve profit margins, and improve overall operational efficiency.

Insight 2: Customer satisfaction remains consistently high

Observation: The average customer rating is **4.14/5**, with **163K five-star** reviews and **127K four-star** reviews.

Interpretation: More than three-quarters of customer reviews are positive, demonstrating strong product quality and customer experience.

Business Impact: High customer satisfaction strengthens brand reputation, increases repeat purchases, and encourages positive word-of-mouth referrals.

Insight 3: Returns increase alongside peak sales periods

Observation: Monthly returns remain relatively stable during the first half of the year before increasing steadily toward **December**, mirroring the revenue trend.

Interpretation: Higher sales naturally generate higher return volumes, particularly during promotional and festive shopping periods.

Business Impact: Reverse logistics, customer support, and warehouse operations should be scaled in advance of seasonal demand to manage higher return volumes efficiently.

Insight 4: UPI has become the dominant payment method

Observation: **UPI accounts for 37%** of all payments, followed by **Credit Card (20%)**, **Debit Card (15%)**, **Cash on Delivery (14%)**, and **Net Banking (7%)**.

Interpretation: Customers strongly prefer fast and convenient digital payment options.

Business Impact: Continued optimization of digital payment infrastructure will improve checkout experience and reduce payment failures.

Insight 5: Order fulfillment performance is strong

Observation: Approximately **350K orders** were successfully delivered, while cancellations, returns, returned-to-origin shipments, and lost shipments remain comparatively low.

Interpretation: UrbanKart demonstrates a reliable fulfillment process with a high delivery success rate.

Business Impact: Efficient order fulfillment enhances customer trust while minimizing logistics costs and operational disruptions.

Insight 6: Product quality and customer expectations drive most returns

Observation: **Changed Mind**, **Quality Issues**, and **Damaged Product** are the three leading return reasons, while **Wrong Item Delivered** represents the lowest return volume at approximately **1.2K cases**.

Interpretation: Operational accuracy in order fulfillment appears strong, but opportunities remain to improve product quality and customer purchase confidence.

Business Impact: Addressing quality issues and reducing product damage can lower refund costs while improving customer satisfaction.

Insight 7: Low wrong-item delivery reflects strong warehouse accuracy

Observation: Wrong item deliveries account for the fewest returns.

Interpretation: Warehouse picking and packing processes are functioning effectively with relatively few fulfillment errors.

Business Impact: Operational improvements should focus more on product quality and packaging rather than warehouse accuracy.

Insight 8: Refund exposure remains financially manageable

Observation: Total refunds amount to **₹105.3 million**, representing a small proportion of overall revenue.

Interpretation: Although returns generate financial losses, the refund burden remains controlled relative to the business's overall scale.

Business Impact: Reducing returns even marginally can directly improve profitability because every avoided return save product, logistics, and refund costs.

Insight 9: Positive customer sentiment outweighs negative experiences

Observation: Five-star and four-star reviews significantly exceed one-star and two-star reviews.

Interpretation: Most customers are satisfied with both products and service quality.

Business Impact: Maintaining high review scores supports customer trust, improves conversion rates, and strengthens long-term brand equity.

Insight 10: Customer experience remains a competitive strength

Observation: The combination of a **4.14 average rating**, **3.05% return rate**, and **high delivery success** indicates a healthy post-purchase experience.

Interpretation: UrbanKart has established a strong operational foundation that supports customer retention and repeat purchases.

Business Impact: Continued investment in customer experience will enhance loyalty while reducing the costs associated with returns and complaints.

Strategic Business Recommendations

Priority Recommendation

- | | |
|---------------|--|
| High | Strengthen quality assurance for products and suppliers , focusing on categories with recurring quality-related returns. |
| High | Improve protective packaging standards to reduce damaged-product returns during transportation. |
| High | Increase reverse logistics capacity before festive seasons , as returns rise alongside sales peaks. |
| Medium | Expand digital payment optimization , prioritizing UPI performance and payment reliability while encouraging adoption of low-cost payment methods. |
| Medium | Collect structured customer feedback after every return to identify recurring issues by product, supplier, and category. |
| Medium | Introduce proactive customer support for high-value purchases to reduce avoidable returns driven by incorrect expectations or product misunderstanding. |
| Low | Recognize high-rated products and suppliers through supplier scorecards and preferred vendor programs to encourage consistent quality performance. |

Expected Business Impact

Higher Customer Satisfaction

Improved product quality, packaging, and customer support will increase positive customer experiences and strengthen loyalty.

Lower Operational Costs

Reducing avoidable returns decreases reverse logistics expenses, refund payouts, and warehouse handling costs.

Increased Profitability

Every percentage point reduction in return rate directly improves net revenue by minimizing refund-related losses.

Stronger Brand Reputation

Maintaining high customer ratings reinforces trust, encouraging repeat purchases and new customer acquisition through positive reviews.

More Efficient Operations

Better planning for seasonal return volumes will improve warehouse efficiency, customer service response times, and reverse logistics performance.
